

ABSTRACT

In the world of the healthcare, the pharmaceutical company has an important role in helping people have a good health. Therefore, Pfizer (Thailand) Limited is the one of many companies which are not only a profitable organization. The company supports all activities that help people. In supporting the activity, PSRs (Pfizer Sale Representative) will get the objective in composing the activity for the people from the hospital or the institution. PSRs will bring that objective to the company. Thus, they will fill in the request form in supporting the budget of that activity. This will be a starting of the request for cheque process. The company calls these request "Sponsorship".

System analysis and Design Methods are used to analyze, design and develop information systems and computer – based application. Moreover, the Programming Design by ASP.Net technology which using VB.Net. This application will replace the old system. It can reduce the depression because we do not worry about the risk of error occurrences during the system conversion. This system has to be tested until no error occurs.

Therefore, the new information system is intended to provide a better solution to the existing system and increase the performance and productivity of operations. This information system will serve the user and the finance staff with consistency, accuracy, security and reliability.
