

Preface

This report presents the development of a School Library System. The current problems of the school library and the scope of the system to be developed are discussed in order to analyze and design the new system. The user requirements, system analysis, system design, security and cost analysis are presented in this report. The details for the data flow diagram and data dictionary are given to enhance the understanding of their functions. The implementation plan is discussed in the last phase along with the program coding, testing, and training plan. The school library system is developed by Clipper5.2 programming language which provides the full functions to accomplish the tasks of the project and also gives user friendly screen layouts to users.
