ABSTRACT

The P/N Information System was developed to improve the existing system which currently done manually. Many problems occurred such as the redundancy of the customer's information and incorrect input data for each department. The complicate of calculating for the interest paid is another difficulty for manual calculating. The proposed computerized system will improve for better operation and service which reach the customer's satisfaction. It also take competitive advantage to company business. This system cover the analysis, design and implementation of P/N information system. It also implements with the user friendly and provides several important report . This system development project helps students not only put their knowledge obtained during study into practice but also learn to adapt the Computer Information System (CIS) to business world. This project is another CIS application for finance related business. The project makes the students complete the CIS study in both theoretical and practical aspects.
