

ABSTRACT

Air cargo system in its present form as a method of general cargo handling had been operating for almost two decades. Now it is very useful to utilize air cargo systems to transport product to all over the world. In Thailand, air cargo system was brought to practice since 1978 with the expansion of Bangkok Port International. Consequent to rapidly increased., But transportation of air cargo system is conducted by documents without developing a modern computer system to the business. The project is organized by data analysis and constructing a model of port terminal which equipped with an administrative data system for handling the business and servicing. The study will turn to be utilized in connection with various aspects of other divisions in the air cargo system.
