

ABSTRACT

In the old day, satellite services seem to be a very expensive choice for small or home office. So, the other access networks such as ADSL or cable modem are developed with the advantage in lower price offering to the customers. Today, with the emerging of broadband satellite which using the higher frequency range in order to benefit with more bandwidth and the smaller of antenna size, the price to access satellite then, comparable to the other terrestrial networks. As well as the rapid growth of the world demand in broadband internet, the broadband satellite is the one of the best alternative choice for the customer with the dominate benefits of low price and availability of services.
