

ABSTRACT

The purpose of this project is to present the wholesaling operation system on the computerization basis in our small organization. The result of computerized system enhances database management to be efficient. Data were collected in table and form, which we can report and print them for document and references.

Our proposed system renovates entire existing system. We can get our product list, customer list or name of supplier in database form, which is more accurate, and easily viewed than manually listed books. Not only list of product, we also get both daily and monthly average sale which helps us predict our sale forecast.

The results of our proposed system help us to have more profit and inventory control system be more efficient.
