Abstract: The purpose of this study was to determine the relationships between self-efficacy for learning Chinese as a foreign language and Chinese academic achievement in four different criteria of Chinese class Phase 3, Phase 4 and Phase 5 (Grade 6-10 student groups) that were divided according to their Chinese language proficiency level. The four criteria were comprehending spoken and visual text, comprehending written and visual text, communicating in response to spoken, written and visual text, and using language in spoken and written form. An adapted version of Motivated Strategies for Learning Questionnaire by Pintrich, Smith, Garcia and McKeachie (1991) was used to collect data from a total of 167 students. The researcher compared the self-efficacy for learning Chinese as a foreign language in Phase 3, Phase 4 and Phase 5 students during the first semester of academic year 2017-2018. Descriptive statistics (means and standard deviations) and inferential statistical procedures (Pearson product-moment correlations and one-way ANOVA tests) were used to analyze the data for this research study. The research found that Chinese proficiency Phase 3, Phase 4 and Phase 5 level students had high levels of self-efficacy for learning Chinese; furthermore, it was found that the level of students' self-efficacy for learning Chinese correlated significantly with students' Chinese academic achievement. Recommendations for practice and future research are provided.

Key Words: Self-Efficacy for Learning and Performance, Chinese Academic Achievement, Social Cognitive Motivation for Learning Theory, International Baccalaureate (IB), Chinese Proficiency Levels (Phase 3, Phase 4 and Phase 5)
