

ABSTRACT

Kim Eng Securities (Thailand) Co., Ltd. is one of the securities companies in Thailand. The company has built a diversified business base across product and service areas for corporate and individual clients; moreover, the company provides a wide range of investment and securities services. Bill Discount product is one of the company's products, which compose of Bill of Exchange (B/E), promissory note (P/N) and bond.

The existing system is based on the manual and some computerized system. Most data are stored on paper, while some parts are stored in a spreadsheet in personal computers of the users. It provides a low quality service to our customers, high operating costs, inconsistent data and a lot of human errors' problems. The computerization is a way to improve the quality service, consistent data and reduce operating costs and human errors. The project covers all phases of system analysis and designs. The proposed system is designed to solve existing problems.

In order to make the proposed system more beneficial in the future, it is recommended that all users must be trained and well-educated how to use the proposed system. End users are introduced to an information system via a training program that includes such information as the purpose and objectives of the system, differences between the existing and the new system, and the responsibilities of end users.
