

Abstract

This System Development Project was developed to improve the existing system for the Personnel Management System, currently it is being done manually which often causes problems and errors associated with manual operations. It covers the analysis, design and implementation of the computer information system of Pro-Line Group of Company. The scope of the project covers the Human Resource Development section and the activity that related to this section.

The proposed computerized system will perform a variety of human resource functions in an integrated and timely manner. It will improve the working method, reduce redundancy process, create better service, and provide more accurate and up-to-date information for management. It also help to conduct tactical and strategic planning by providing a relatively easy means to analyze, query and manipulate the data on an ad-hoc basis.
