

ABSTRACT

Business Development Unit is one of the organizations depended on Krung Thai Bank Public Co., Ltd. It has provided the money services to both the individual and government companies. Nowadays, there are many competitions in the money service business. So competitors must try to improve their service and their management systems for efficiency and effectiveness of business administration. It is imperative that a good system be maintained to ensure the maximum capacity of organization's service. Therefore, this project is to develop the effective information system to facilitate the process of Tracking System for Agreements Flow of Student Loan.

The current existing Tracking System for Agreements Flow of Student Loan is based on the manual and some standalone computerized system. Most data are stored on paper, while some parts are kept in the Microsoft Excel. It requires many administrative staff to maintain the system, and has to face the general problems of manual system, which are error-prone and having a high maintenance cost.

The new proposed Tracking System will be developed to replace the manual and some computerized information system with Network System. All data are kept in the database server on Microsoft Windows NT 4.0. The user interfaces, moreover, are implemented on Microsoft Access. It will reduce the number of administrative staff, solve the problem of the manual system and decrease the high maintenance cost.
