

ABSTRACT

The financial statement information system is a system which supports information to the financial manager for better decision on investment and to generate several kinds of financial statement reports.

The scope of the project concerns with the interactive processing to enter information about promissory notes and bills of exchange. Including interest rate calculation for each finance.

The system is designed on database file on Netware LAN. The interactive processing make users to produce their own system. Basically, each activity in the new system aims to serve operation and make users friendly. User can produce input, process and generate output in a short time.
