ABSTRACT

This project presents development of the Training Information System (TIS). At present the company has a training center, it can support one hundred and fifty residential trainees per day. So the Human Resources and Organization Development Department needs the computerized tool for operating training process and keeping training history records.

The Training Information System is classified into three sub-systems. The first is the In-house Training sub-system. It is not only a record-keeping system but also uses to check the training history of each employee in various conditions and records automatically into the system. Now this process is done by training staff. It takes time very much and there are still human error too. The second and third are Outside Training and Scholarship sub-system which are common as record-keeping system.

The main objective of this project intends to develop the In-house Training sub-system in the first priority. The others are designed for further study.
