ABSTRACT

This research is aimed to study the strengths and weaknesses in education the Faculty of Science and Technology, Assumption University. The criteria studied in this research can be classified into two main groups: teacher effectiveness and university facilities.

The descriptive of ex post facto design is selected as the research method. Using the self-administered questionnaires technique, the researcher distributed 174 questionnaires to all 307 bachelor students who are studying in the Faculty of Science and Technology, Assumption University.

The research result can be concluded that there are only three main criteria from the literature review that show the strong points. They are knowledge, responsiveness and curriculum. Finally, there are four criteria falling into the points of weaknesses, which are skill, Internet, computer facilities and administration services.
