ABSTRACT

Nowadays, computer technology is more quickly progressive than other types of technologies. Computer technology has taken over business activities, so computer is an essential tool to make work flow in business smoothly. The Internet that is one of new computer technologies has become an essential computer system for business now.

In this System Development Project, the System Analyst phases will illustrate the business requirements of the existing system, and also explains the business requirement in model form that is easy to understand. The System Design phases will cover the solution to choose from the alternative candidates and that is comfortable for the proposed system and it provides all the tools for progressive phases.

This project intends to provide better solutions to change from the existing system to the proposed system by describing the effects when the existing system is changed to the proposed system, and it shows benefits that the company will earn when it uses the new computerized system.
