

ABSTRACT

This project presents system analysis and design in Sales Information System for Millennium Motor (Thailand) Company Limited. The current system is the manual systems that generate the problem in performing efficiently and effectively in the business operation.

The current systems has shown the delay of sales activities process as the new system design phase will cover the new computerized system to increase the performance of over all related activities and the organization.

The proposed system is expected to provide easy-to-use computer application. The information are more precise, updated, and can be gathered quicker for the operational functions and the dealers, as the system will manage the standardized procedures to benefit all operational functions.
