

ABSTRACT

Total Exploration and Production Thailand (TEPT) is dealing with the high technology industry, the management always needs the right information at the right time for the right decision making. All supporting functions like financial department should support them with high quality and on time information.

This system development project is carried out to improve efficiency of the existing budget and cost control system of company by using computerized system. This system can help all cost accountants in performing repetitive jobs that they used to do by manual in the past. As a result, all cost accountants can spend most of the time in doing analyze the information that came out from this system to support all management need.

All chapters in this project covered with the system analysis and design, which have to study the problems and requirements of users in the existing system and design to the new system.
