

ABSTRACT

This system development project was developed to improve the existing operation for Compute & More Co.,Ltd. Where is the computer hardware shop. Nowadays, they face the problems in the existing system which cannot support management team to make decision. There are many transactions occur among the departments. Sometimes, errors occur and not up-to-date information.

Therefore, the new system will support them to solve these problems. Furthermore, the new system will help a lot to reduce the routine jobs and paper files. If they use this system in all of transactions, they will satisfy in the result because it will support their works and produce the fast and more reliable output supporting the manager.

The next step of the project will expand the system to link to the new branch where they are planning to open at "Tawanna" computer city in the next year. The modem will use to communicate the data from head office to the branch.
