

ABSTRACT

Nowadays, doing business needs the information to get certain to be business able to compete with competitors. The more data or information we get, the more we get business advantage. That's why information is very important to the organization these days. Regarding the organization selected for this project, apartment businesses are interested in providing information technology for their organization. Currently, we have accepted that computer based system is also needed for apartment business.

This project let Tubtim Apartment provide and improve efficiency of work. The system provides information management that is required for Tubtim Apartment. It also makes the organization speed up work flow, and reduces the problems and errors of work.

The proposed system is implemented using Microsoft Access as Database Management System to keep all needed data that involves with Tubtim Apartment. We modify business work flow via computing network, discuss information technology architecture, propose hardware and software requirements, analyze cost and benefit of the proposed system, design database, and report design. Finally, we provide conclusion and recommendations at the end of this project section.
