

Abstract

i

This System Development Project provides the analysis, design and Implementation of a Sales Information Systems for an Automobile Tire Company. The system provides the Customer, Order Processing, Verify, Bill Process, Sales Analysis Reports including File maintenance Menu. This system is proposed to reinforce the existing system of the company. It will also help save cost, time-consuming including productivity of the operations.

The new system would provide on time query response that might be requested at any time and received in a matter of seconds as well as customized reports that are consistent, accurate, timely, economically feasible and relevant. The major reports produced are the management's requirements, and also the Revenue's. Finally, The major output of this System Development Project an effective tool to provide better services to the Managing Director and Authorized persons.
