

## ABSTRACT

Apartment Management Information System is a project development for AK. PRESIDENT. The project begins with the system study plan in order to study the existing system and its operational problems. The information study includes background of the organization existing functions and requirements.

The system is analyzed by using structures analysis techniques such as Context diagram and Data flow diagram. The designing of the system covers database design, input design and output design.

The proposed system will design the computerized system to solve and to improve the existing operation system. Moreover, the system will keep consistency and integrity of the data and provides various reports for management to plan and forecast effective decision making.
