

ABSTRACT

Inventory Control Information System is created for a small size business, SunRise Co., Ltd. The business provides quality products, financial services and recommendations to customers. The nature of business requires a tremendous amount of data to be collected on customers, suppliers and products. A lot of paper documents are kept for reference.

Currently, all processes are done manually and are time consuming. Files are kept in file cabinets, which is hard to search for. Information seeking is always taking a lot of time. These cause workers to do over time, which increases operating expenses for the company. Due to intense competition in business, the company needs to improve business processes for more customer satisfaction.

With the proposed system, it will use computerized system with client/server computing connected by LAN. All inventory data will be kept in database using MS Access as its application create a user-friendly interface. Information can easily be retrieved in a short time. Document and report preparation can also be prepared in less time also. It solves the problem of the existing system and provides better information support for management.
