ABSTRACT

This Project presents the study of the Production Planning for the Pharmaceutical Products. By using the existing package program (Lotus 1-2-3 or Quotro Pro), it cannot serve all the user's requirements whereas the business is growing up. They need more information for making decision and competing.

The project covers all phases of systems analysis and designs starting from finding information requirements from the users. The proposed system is designed to solve all the problems. New Context Diagram, Data Flow Diagrams Output Designs are also provided in the report. The cost comparison between existing and proposed system and the implementation procedures are shown.
