

ABSTRACT

The purpose of this project is to create a new computer information system which is an automated system to assist the library's information services function at the library section of Bank Of Ayudhya Public Co., Ltd. The analysis and design of computerized information system for the organization is an exciting and changing field. As the use of computers rapidly spreads to various organizations, prospects of using computers to improve productivity and attain organizational goals increase commensurately.

The Library Information Services System of the Library Section of Bank Of Ayudhya Public Co., Ltd. would be a stand alone PC-based computerized system design for library information services function and also for the maintenance and management of the library information materials. The system would be create for the registration of library information materials, included periodicals, audio-video cassette tapes, and training documents and it is based on Foxbase package program which is commercially available.
