

ABSTRACT

The System Development Project was developed to improve the existing operations at the Employee Salary System of La Neige Boutique Co.,Ltd. An Existing System presented problems such as error of information and slow of salary calculation. Users have expressed the need for Computerization of an Existing System. Considering the requirements of users. The Proposed System was designed to provide the right amount of information to the right people at the right time. The tools of structured analysis such as data flow diagrams, context diagrams, and data dictionaries are used for analysis phase. The detailed design is accomplished by designing database design, software design, reports design and screen design. Niam conceptual schema is used for database design. The major hard copy output are Employee Information Record, Payslip. Leave Information Record, Employee Performance Record.

Finally, the major outcome of this project is a computerized system that would provide the Human Resources Department of La Neige Co.,Ltd with an effective tool to provide better corporation as well as Management.
