

## ABSTRACT

Nowadays the computer has been widely used in every field of business. And it can help people to increase the efficiency and effectiveness. The work will be done in shorter time with more accuracy. Therefore, the manual system must be replaced by the computerized system to increase the competitive advantages against their rivals.

On this System Development Project, the System Analysis phase includes several tasks such as to study the existing system function, equipment and documents, to identify the current problem and areas which have to be improved and the organization planning. The System Design phase covers the new system for users' requirements in details such as Sales Activities, Purchasing, Job Done etc.

This project, therefore, intended to provide the better solution to the existing problems and increasing the efficiency of the operations by applying a computerized system. The information for management are consistency, accuracy, timeliness, completeness, and relevance. So the management can take the right decision and planning in expanding the sales volume and sales channel.
