

Abstract

The subject of this project is to study undertaken at an established, occupational health screening program which is a basis information part of Occupational Safety and Health Information system (OSHINFO) of the National Institute for the Improvement of Working Conditions and Environment (NICE), Department of Labour Protection and Welfare . The terms of reference are originally discussed for managing occupational health screening data being as OSH information for OSH inspectors when they visit to factories and for surveillance workers ' occupational injuries and diseases.

NICE, Occupational Safety and Health Information system currently is written by using MINISIS program from International Development Research Centre (IDRC) which serving the users through information system. The study emphasizes on occupational health screening information.

The occupational health screening information is a basis information part to support and to complete the OSHINFO system for inspection and analysis of the working environment effected to Thai workers. As a result, OSH inspectors can get information which they had recommended to the visited factories for the improvement of working conditions from OSHINFO system. Then they can easily follow up the unsafe working conditions and environment inspection and surveillance occupational diseases.
