

Abstract

This System Development Project was developed to improve the Existing System for the Mail Order Purchasing System, currently most being done manually which often cause problems and errors such as slow service (due) to excessive paperwork. The project covers the analysis, design and implementation of the computer information system of Shopping Mail Co.,Ltd. The scope of the project covers many parts of Mail Order Purchasing Functions of Marketing Department, Accounting Department, Customer Service Department and also Collection Departments.

The proposed computerized system will perform a variety of Mail order purchasing functions to provide a better solution to the problems in an integrated and timely manner. It will improve the working method, reduce redundancy process, create fast service and provide more accurate and up to date information for management level.
