

## ABSTRACT

This System Development Project was developed to improve the existing Payroll System of Tan Siam Food Limited. The work presented in this system consists of Data Flow Diagram, Structure Analysis and Design Techniques to replace currently used Manual System.

The existing system is studied and analyzed, problems are identified, the new system is designed to cover software design, database design, input-output and menu design.

The system is implemented with MS Access to solve, minimize the problems, and provide a computerized system to store up-to-date and accurate data. The menu driven and form filling screens are covered to suit the wide range of users. The information of the system can be shared and retrieved to reduce time, cost and redundancy.
