

ABSTRACT

Health Center 62 is an organization that provides health care services and need to improve performance and efficiency of the organization. The purpose of this project is to develop an effective information system to facilitate work processes of the organization.

The existing information system is based on the manual system and is very slow and produces poor performances. Data sre stored on documents so it cause high maintenance cost. In addition, there is no recovery plan when data are lost.

The new information system is a computerized system in a form of two- tier client/server model linking all departments of the organization. Most of data are stored on a database so the maintenance will decrease. The new system accelerates routine processes so that performance and efficiency can increase.
