

ABSTRACT

It is not an easy thing to run a business in today's situation. Every business is faced with a high competitive market. All organizations aim to maximize profits and reach their goal. Efficient control of sales system is obviously one of the significant objectives to meet the goal.

This project aims to implement a computer system for Kittitrakul Co., Ltd. to replace the old system. Studying the existing system and analyzing the problem then designing the new system are the processes of this project. The project makes use of System Development Life Cycle methodology (SDLC) that consists of analysis, design, and implementation phase. The scope of the project covers the sales section and the activities related to the section.
