

ABSTRACT

The system project named Rice Export Control Information System provides a study and analysis of the computerized information system. The project covers the information gathering, the functions of the existing system , the existing problems and users' requirement. It also includes The Data Flow Diagram, Relational Database, Structure Chart, Data Dictionary, Examples of Document, Screens and Reports.

The purpose of Rice Export Control Information System is not only solving problems of the present system such as the task redundancy and time spending but also providing accurate rice export information. It will produce the Certificate and License for the exporters as reference during their rice exporting business.
