

## ABSTRACT

The objective of this project is to develop and improve the existing operation of Phoonsin Wattanakit Company. The study emphasized computerization of inventory information system. Currently, the maintenance handling and processing of inventory are done manually. Problem in the existing system are associated with manual operations such as excessive paper work, information is not up-to-date and the volume of transaction is large, therefore, it is essential to develop the system to be computerized to improve productivity and attain company goals increase commensurately.

The Inventory Information System of the Phoonsin Wattanakit Company, would be a PC-based computerized system and based on FoxPro which is a commercially available software. The application program, various data entry, processing program, reports, system documentation and user manual have been produced for user's benefit and future maintenance.
