

ABSTRACT

The debt restructuring plan emerged to resolve the Non-Performing Loans problem by the parties involved in debt proposed debt restructuring plan to present the business viability and the potential to pay debt.

The aims to contribute Debt Restructuring Planning System is developed an effective information system to facilitate the process of small and medium sized business debt restructuring, which normally, process is based on the manual system. All data stored on paper leads to many problems.

The proposed system will be developed to replace the manual system with the information system on Client/Server, which connected via the network system. All data are kept in database server, Microsoft SQL Server 2000, the development tools which help to design the user interface is Microsoft Visual Basic and generated reports by Crystal report. It will reduce the number of error from human and also solve the problems of manual system. Therefore, the proposed system will provide the convenience to users and enhance the debt restructuring plan format for the involved parties in the corporate debt restructuring process.
