

Abstract

This system development project is developed from the manual system to be computerized for Human Resource Department of a pharmacy company.

The existing system presented problems that are associated with manual operations. The new system will help to address a variety of human resource functions in an integrated and comprehensive manner. It will also provide to support for a single or a small group of human resource activities.

Inside this project, it begins with the background of the existing system, why it need to be computerized system, the new system requirements, and who will use this system. Moreover, the project also include the output design, input design, and the output report may be in the form of paper or displayed in the screen, data dictionary, the description of each file used, and all the necessary things that the system analyst should do in designing the new system are also records in this project.
