

## ABSTRACT

This project is developed under the topic of Global Insurance Information System for International Trading Business Group which will be operated by Insurance Office. The purpose of this project is to develop the new information system to make better improve on underwriting insurance of trading business in both local and overseas. Due to the business has to operate in the global world market, rapidity and accuracy is needed to follow-up the market change occasionally. The purposed system is recommended to replace and update the current computerized information system to improve efficiency in performance of gathering, analyzing and underwriting insurance for all related trading companies. Eventually, the purposed system enable to pursue the policy of risk management for the company to secure the company loss.
