

ABSTRACT

Increased competition in the Entertainment Business has made the greater productivity, lower costs and better customer service. The Entertainment products increase rapidly, especially cassette tapes, CDs, Videos, Mini discs (MD) and Laser discs. Inventory Control System is developed to improve the existing system of Mountain Record Entertainment Co., Ltd., that now is operated manually. This takes time to serve clients, handle much paper work and supply unreliable data.

The proposed system can be developed to improve the existing system operation. The emphasis is on computerization to provide the right information at the right time. The main functions of the inventory management are to check the stock, to order the product, to distribute the product, to receive purchase order, to generate invoice, and to generate report. The computer system will serve these operations and produce input, process and generate output more efficiently.
