

## ABSTRACT

Cana Mansion is one of the many apartments in Bangkok that provides room renting service for customers. The way that Cana Mansion does the advertising is to use the leaflet, billboard, and post in <http://www.easyhorpak.com/Overview.php?id=13297>. And the management process includes reservation and contact management, bill receipt, room management, maintenance management, and report management.

The objective of this report is to improve the advertising media of Cana Mansion by using the Internet which is a global network of computers used to transmit information. This project is going to create a Web site by using PHP scripting language, because in Thailand there is not much apartment Web sites and the information is not up to date. This project also concerns about the back office process that should be improved by using the database system which is MySQL.

After this project has been implemented, Cana Mansion will have the organization's Web site that provides both front-end and back-end Web pages. The tenants and the potential customers will know the current occupied accommodation and the updated organization's information. The process of management will be improved in many ways which are the convenience in billing management, room management, maintenance management, and report management.
