

ABSTRACT

This project is aimed at designing a software to store and evaluate the test items system. The test item storage system has become more important because it has been the place to evaluate and improve the quality of evaluation process. The teacher has to input the test item as source information. The system provides some facilities in inputting information, such as spelling check, inserting images as content in both question and answer. To generate the examination paper, the teacher has to specify test criteria, such as grade level, subject, lesson, difficulty level, and question type.

For security issue, the user's password has to be encrypted. Moreover, the teacher can modify or delete the only test items only the one they produce.
