

ABSTRACT

This project deals with alternative operating systems for end-users who desire to handle a high performance operating system. This operating system was developed by a graduate student name “Linus Torvalds” at the University of Helsinki in Finland with the help of many UNIX programmers and wizards across the Internet. This project paper tries to explain how to use this operating system step by step. The project has the example of a business which imply Linux operating system and include a cost comparison detail in support of the analysis presented.
