

ABSTRACT

Suvic Car Pro Co.Ltd is a traditional car repairing company that has been established for more than 15 years. The company is offering common services such as wheel alignment, wheel balancing, changing tyre and oil and engine repairing. The company also has been granted authorization from the Department of Land Transport to be an Inspection Center to inspect used cars in Bangkok before the car owners bring their cars for the registration. The company realizes that many of the owners forget to bring their cars for the registration before the dead line. The owners are penalized for the delay.

Suvic Car Pro is a project that developed and designed a website for the existing business to communicate with the customers to prevent them from the penalty. In this project the analysis of the current situation, the new design of database, cost and benefit analysis, and web prototype design were also conducted.
