

Abstracts

The system development project is about analyzing current system, structuring & organizing data in aspect of designing and implementing computer software & hardware of Sales Order Processing System.

There are many computers and printers have been used in company's sales department but the effectiveness and efficiency are quite low. After investigation the current information system and user 's requirement , the new system is developed by modeling tools as Dataflow Diagrams, Structure Charts, Database & Data File Design , Network Configuration and Input & Output Design. This project is designed in order to connect the existing automated system with new proposed sales order processing system and also to utilize the existing resources.

This project will be useful for company and can help them work more efficiency, effective and accuracy.
