

ABSTRACT

This Security Document System for Banking Business development project contains the analysis, design and implementation of a Loan Administration Department of a bank. This system assists Loan Administration and Risk Control Department to operate and to control the documents which used as the collateral of loans granted to customers.

This system can provide the List of Reports which shows the missing or pending document for Loan Administration Department to follow the document from the customers. This can reduce the bad debt and risk which may occurs in the future

This application is implemented by using PC LAN with Oracle 7.3 Database System and Developer 2000 to develop the software.
