

## *ABSTRACT*

This Project presents the development of a 'Stock Security System'. This project covers the system analysis and system design for stock security system in ABC security co.,ltd.

The existing system for ABC security co.,ltd. is manual and does not use automatic equipment. This project,therefore, introduces the first automation concepts to the stock security system and provide information to management to decision making.

In this project we present the stock security system for financial company to best meet the present and expected future business and information needs of financial company with currently manual stock security system. Moreover,there are a number of expected benefits a Financial company should derive from a computerized Stock Security System implementation as sharing of information and one-time data capture,timeliness,accuracy,improved management information and reduction of manual effort.
