ABSTRACT

The training system of Thai Shell Exploration and Production Co., Ltd. has been improved and developed for reducing problems from the manual operations.

Currently, the processing of the training system are done and managed all entried data and information with the manual. Some problems are occurred with the manual operations. The new system will help to reduce some errors and uncertainty information. The new system has more ultilization to use for the long term. These proposed system will not only assist the training staff in keeping ,update records and produce routine and repetitive reports, but will also help The Personnel Administration Department to manage in tactical and strategic planning providing them with a relatively easy means to simulate, query, forecast and statistically analyze.
