

ABSTRACT

This project focuses on the operational problem solving and providing management information of the D'Jit Pochana Restaurant that operates in manual basis. The main idea is to combine the manual system with the computer to improve the efficiency of the whole system. According to the existing system, there are so many weak points for example material and cost controlling, time wasting in service process, and cash controlling. The area of the project will cover system analysis and design and system implementation of the restaurant system, and plan to replace the manual system operates by the cashier section, financial division, and the administration division.
