

ABSTRACT

Order Processing and Invoicing System is a project development for Dana Industrial Co.,Ltd., a multinational company which imports Warner electrical equipments to Thailand.

The project begins with the system study plan in order to study the existing system and its operational problems. The information study includes background of the organization, existing functions and requirements, problem areas and existing hardware and software.

A proposed computerized system will replace the existing manual procedures in order to solve the existing problems of inaccurate and untimely reports, and time consuming on daily operations. Moreover, the new system provides several useful reports for management to plan and forecast for effective decisions making.

This report is to document the system development activities and products and is intended to demonstrate that the proposed system and procedures will lead to the saving of time and money by solving the problem identified under this study.
