

ABSTRACT

This report was included the purpose in designing the cosmetic products E-commerce System. It also had a substance about e-commerce For instance, in part 2 which mentioned about what is e-commerce, how does it work, and its framework. We had included the steps in designing the database system to use it in saving all of the details in this system. We could use this database system with catalogs, shopping carts, product details, and the paying steps of the customers.

The system's abilities this part of marketing and increasing the total of the sales by presenting in a graph of payback analysis, the cost that compare between the manual system and the computerized system, and doing the SWOT in both system to compare and gain the conclusion in the marketing to the designed.

In the last part contained the conclusion about the efficiency of the system. It's result in using the new system instead of using the old one. The last part also included the screen shot presenting, such as the log in steps for buying goods that was shown in a picture placed in the back of this report.
