ACKNOWLEDGEMENT

This report is to fulfill the subject of Business Information System Major, BIS 4995 Information System Development.

First, we would like to give our special thanks to the managers and staff in Bell Car Rental and Leasing Company for providing us the necessary information as well as data. Also, we would like to thank Mr.Hudsadin Eamsherangkul, Assistant Manager for providing us important suggestions and directions of designing the system as well as information regarding existing system.

Second, we would like to give big thanks you to our project advisor, Acharn Patamate Darnphitsanupan. Without his encouragement, suggestions, we would not be able to complete this project. As he always encourage us to visit him often and he was always available to help us solving the difficulties that we faced.

Last, we would like to thank you to those people who provide their suggestions and information regarding our project.

I. INTRODUCTION

1.1. Organization's Profile

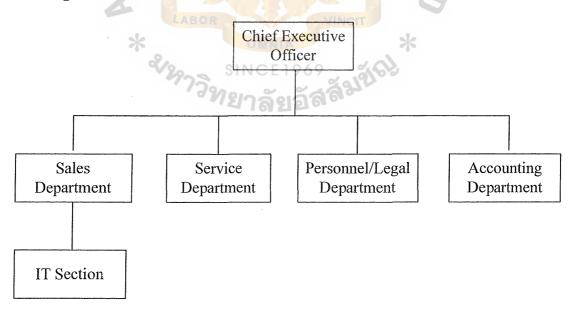

Bell Cars Rental&Leasing Co.,Ltd. has been established since 1990 by an experienced management team in transportation-related business. With strong commitment to become the rental vehicle company of choice, Bell Cars Rental & Leasing Co.,Ltd. offers excellent services, quality products with service minded personnel and persevering improvement to meet and exceed the expectations of all customers.

Bell Cars Rental&Leasing Co.,Ltd management team consists of accomplished executives, and is constantly inspired to reach the highest potential. With extensive experience in the business for more than three decades, they pursue perfection through constant training, motivated staff, and most of all, customer first attitudes.

1.2. Organization's Location

402 Soi Rewadee Rama VI Road., Samsannai, Phayathai, Bangkok 10400

1.3. Organization's Structure

1.4. Project Plan

Since the plan to implement online reservation system is underway, we have to prepare and create company's website as well as back-end office system to provide eservices to customers and replace internal manual system. The total time to complete this project is estimated to last for 3 months.

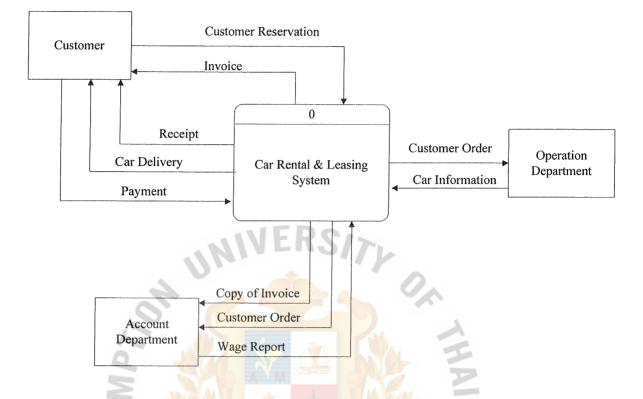

First of all, we need one week to analyze of the existing system and it will be starting in the first week of November. During this week, we will study the existing system, identify the existing problems including existing context diagram. Second, we will conduct preliminary investigation from the first to third weeks of November. Within these three weeks, we will define the objectives and scope of new system for two weeks starting the first week to second weeks of November. Then, we start to define Hardware and Software requirements for one week on the third week of November. Third, we will analyze and design the Proposed System for two months and two weeks. We will use two weeks to do Entity-Relationship Diagram and two week for designing the database. For Data Flow Diagram, we will use two weeks for drawing and Data Dictionary in one week. We will also use six weeks for Interface Design starting third week of December to the last week of January. Finally, by the second week in February, we will finish coding the website including backend office system and the report design in one week by second week of January.

Figure 1-3 Project Plan for Car Rental Reservation System of Bell Car Rental and Leasing Company

II. THE EXISTING SYSTEM

2.1 Background of Existing System

Figure 2-1 Context Diagram of Existing System

2.2 **Problem Definition**

(1) Inefficient record Management

Documents were recorded in paper or some kept in Microsoft Excel files. There is no database to keep all information including customer details, rental details, documents, and etc. The company uses only Microsoft Excel to keep the cars schedule, while the rest keeping files in folders. Since there is no database to keep information, data and transactions cannot be updated instantly. The company cannot track or trace for specific data, especially the vehicles current status once it leaves the garage.

(2) Conventional customer services

The company does not accept individual customer reservations. Thus, customers have no other choices of making reservation, but through telephone. In addition, there is no company website for customers to check flee rate, special promotions, and awards. If customers would like to know these details, they would have to only call the company for details. Furthermore, customers can make reservations or ask for details only during the office hours, which is not convenient and the company might lose the customers to its competitors.

III. THE PROPOSED SYSTEM

3.1 Feasibility Study

- (1) Objectives of the System
 - a) To change the existing manual works into computerized system.

First, the system will have to be able to see real time inventory of vehicle in the fleet. Second, system will have to officially share up to date and accurate data for users in various departments with authorized access control as well as keeping all information into database. Third, records will be updated instantly once there are any changes occur. Finally, the most important feature is to build up database to keep all information regarding customer details, vehicles, and etc. So, it will solve the problem of paper-based work. Also, company can retrieve customer information in a very short period of time by searching from the database.

b) To provides company website with e-services

The Bell Cars Rental would like to provide website to customers. So the customers can log on to website anytime at anywhere. The website will have online reservation, fleet type, rate information provided to customers. The website will have responsive content and with user friendly designs. This website will accept both individual and corporate customers to make reservations. It allows customers to keep track of vehicle usage and check their payment status, including rewarding program. Also, the website must have company profiles and related information.

 c) To help both company and customers reduce time of communication and cost reduction.

7

The Bell Cars Rental wants to create Internet usage as its business tool. Customers can communicate with the company and gather information via the website. Moreover, Bell Cars Rental has to design a system that provides the company and customers for quick, simple, and convenient functions for their operations.

- (2) Scope of the System
 - a) Quotation & Reservation (E-commerce) Module.
 - To allow customers to register online.
 - To provide customers of check flee rates, special promotions, and awards.
 - To provide customers to check and view the vehicles online.
 - To make online reservation forms for individual and corporate customers to reserve online or to accept online reservation.
 - b) Maintenance Module
 - To create and maintain database of customers with level of ABOR access control.
 - To keep schedules of cars so that the company can check schedule for each car operation date.
 - To keep current status of cars so the company can track and trace the cars.
 - To assist the management in making decisions whether to keep a vehicle in the rental fleet or to sell it out.
 - c) Billing and Payment Module
 - To make car rental summary for the customers so customers can see summaries of all their rentals.

- To create and maintain maintenance records along with detailed expenses on each rental vehicle.
- To create invoices to customers and summarize income and expenses on each rental job.
- To accept customer payments.
- To create receipt for customer once the payment is done.
- d) Management Report Module
 - To generate Weekly Vehicle usage report categorized by:
 - Plate Number
 - Car Model and Color
 - Fuel

SU V

- Fuel Consumption
- Chauffer name
- To generate Monthly Wage Report categorized by:
 - Chauffeur ID
 - Destination
- To generate Quarterly Purchase Car Report categorized by:
 - Car Model, Color
 - Cost
 - Date of receiving car
- To generate Monthly Car Maintenance Report categorized by:
 - Plate Number
 - Car Model, Color
 - Last and next check up date

- Total cost of maintenance
- Status
- (3) Hardware and Software Requirements

* ซัหาวิท

Because a server computer in a company is very important, it works as heart network computer systems for the whole company. As a result, it needs high specification computers such as high speed CPU, high volume harddisk, and ram. For a client computer, it does not need to have a high specification as the server; mainly it focused more on the speed or processing data and enough space to keep all the information. The specifications for the server and client computers are shown in Tables 3-1 and 3-3.

For Software, we use Microsoft Windows XP as the operating system because it is the newest products of Microsoft and has good performance and reliability system. Also, Windows XP has the function of IIS that help and support for create Web site with Active Server Page.

(c) The Comparison of Accumulated System Costs between Existing System and Proposed System

Table 3.7. Accumulated Costs of Existing System for 5 Years, Baht.

| Year | Total Annual Cost | Accumulated Existing System Cost | |
|---------------------------------------|-------------------|-------------------------------------|--|
| 1 | 968,192.00 | 968,192.00 | |
| 2 | 1,095,152.65 | 2,063,344.65 | |
| 3 | 1,231,013.06 | 3,294,357.71 | |
| 4 | 1,366,563.97 | 4,660,921.68 | |
| 5 | 1,502,781.36 | 6,163,703.04 | |
| 9999 9999 999 999 999 999 999 999 999 | | | |

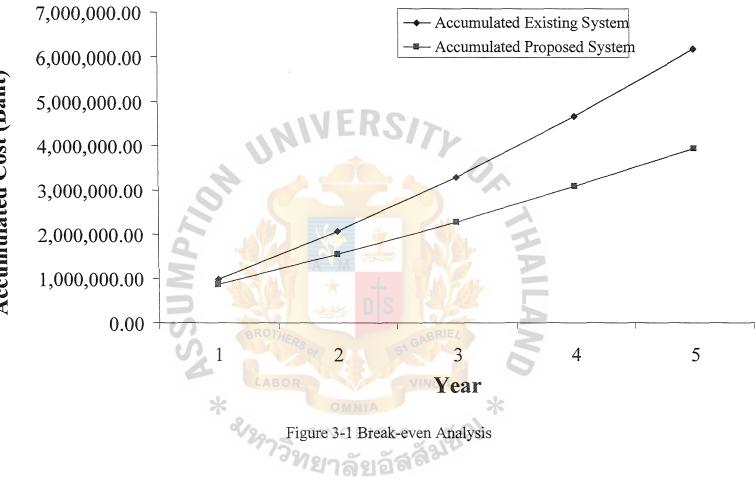

Table 3.8. Accumulated Costs of Proposed System for 5 Years, Baht.

| Year A | Total Annual Cost | Accumulated Proposed System Cost | | |
|---------------|-------------------|-------------------------------------|--|--|
| 1 4 | 864,620.00 | 864,620.00 | | |
| 2 | 670,600.00 | 1,535,220.00 | | |
| 3 | 732,028.00 | 2,267,248.00 | | |
| 4 02 | 802,808.00 | 3,070,056.00 | | |
| 5 | 871,597.00 | 3,941,653.00 | | |

Table 3.9. The Comparison of Accumulated System Costs, Baht.

*

้^{วท}ยาลัยอัสลิ Accumulated Existing Accumulated Proposed System Year System Cost Cost 864,620.00 968,192.00 1 2,063,344.65 1,535,220.00 2 2,267,248.00 3 3,294,357.71 3,070,056.00 4 4,660,921.68 5 6,163,703.04 3,941,653.00

Accumulated Cost (Baht)

From figure 3-1, you can see Accumulated Existing System Cost (AESC) graph and Accumulated Proposed System Cost (APSC) graph. AESC graph is the blue line that shows the existing system accumulated cost for 5 years and the pink line represent the proposed system accumulated cost for 5 years. At the first year, once the company implements the new system, the accumulated cost of proposed system will be higher than the remaining four years because the company has to pay for the implementation cost and training cost for the new system. Also the company has to buy new hardware and software that are required for the new system. However, starting second year proposed system cost will be lower than existing system as the system provides the benefit to the company. Starting the second year after implemented the new system, it will start reducing the cost of the company as expected. Although the new system cost will be getting higher each year, but it will still save a lot of money compare with the existing system.

3.2. System Design

(1) Data Flow Diagram

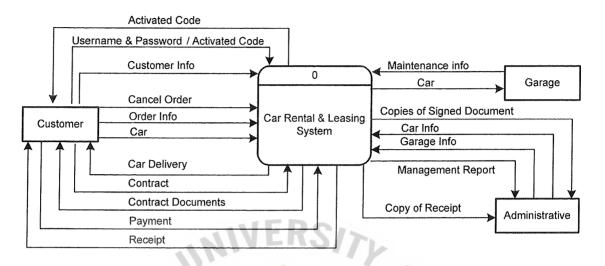

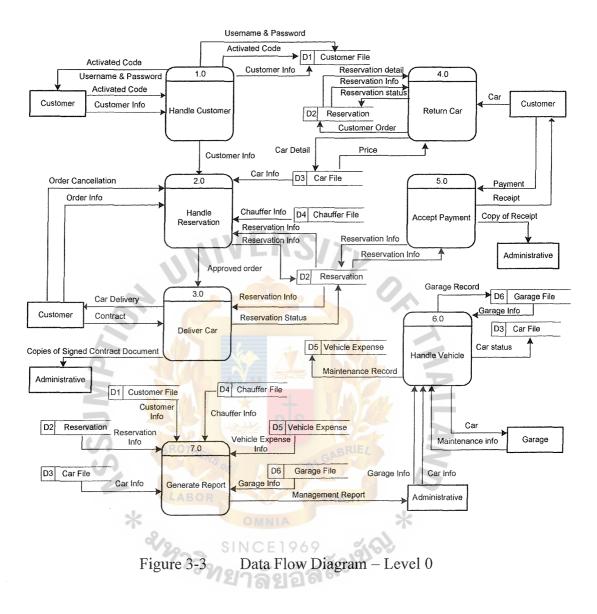

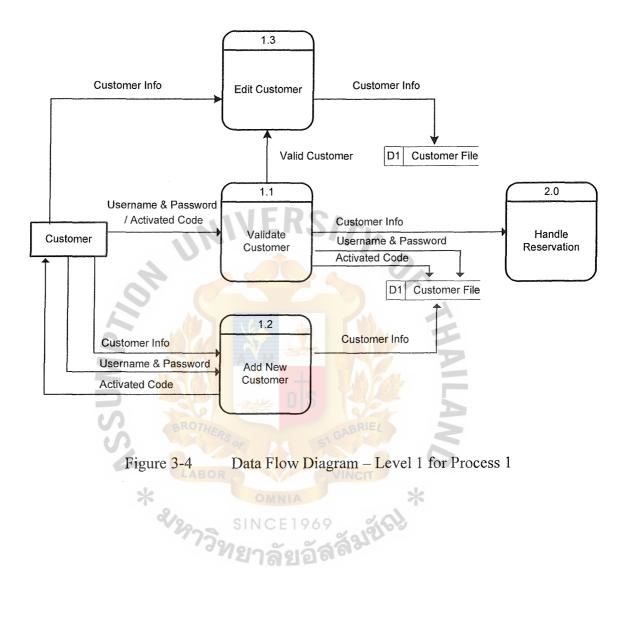

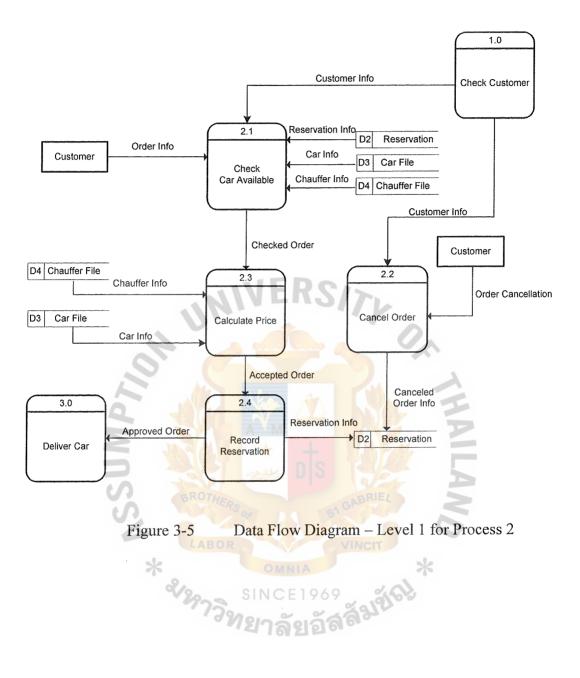

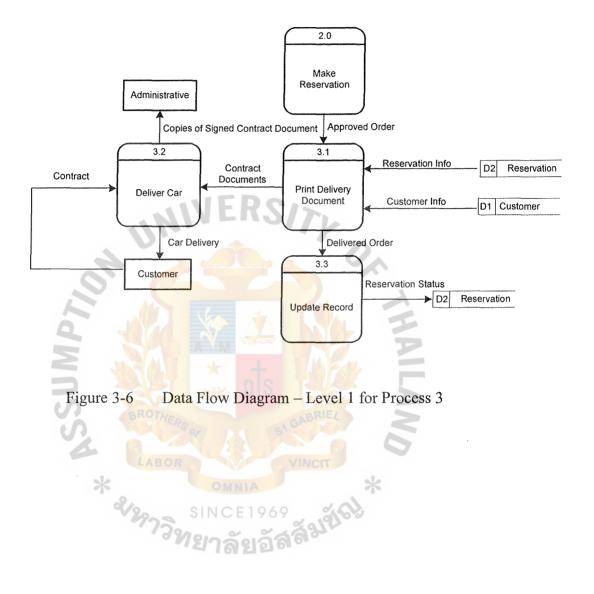

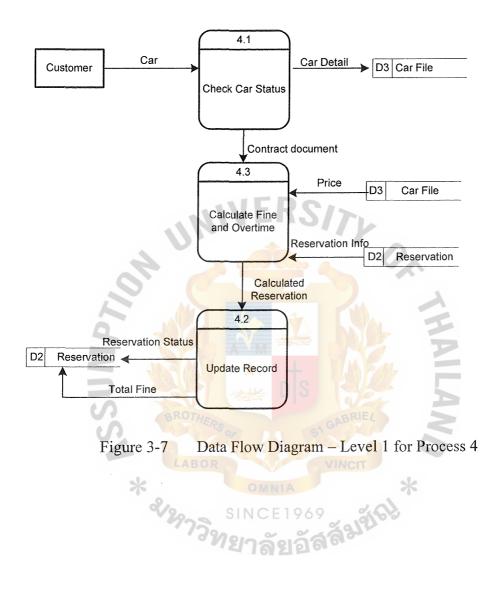

Figure 3-2 Context Diagram of proposed System

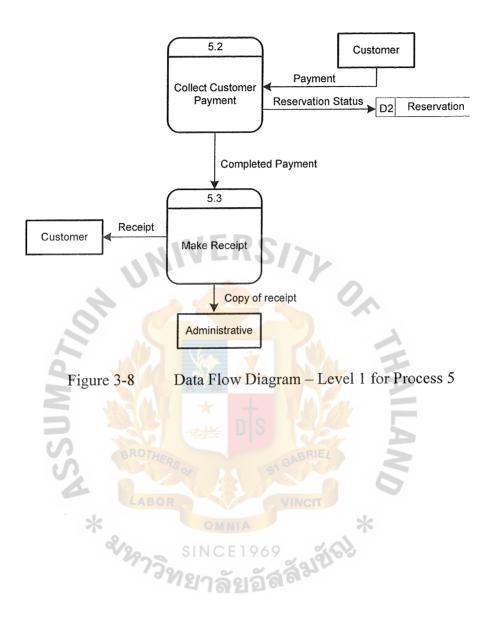

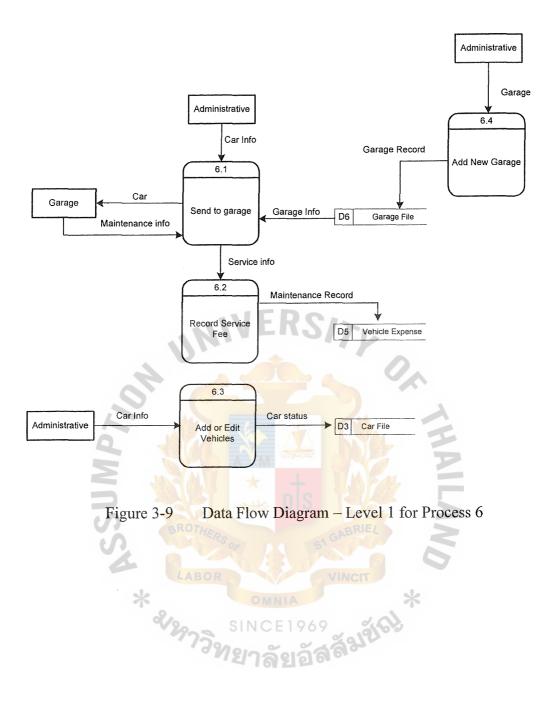

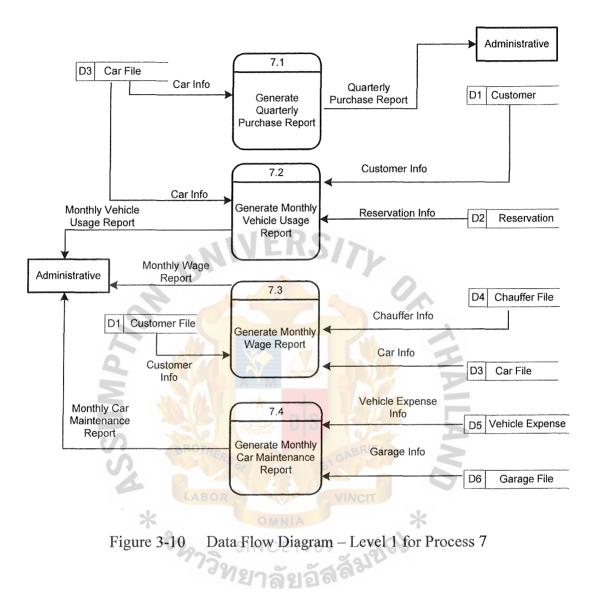

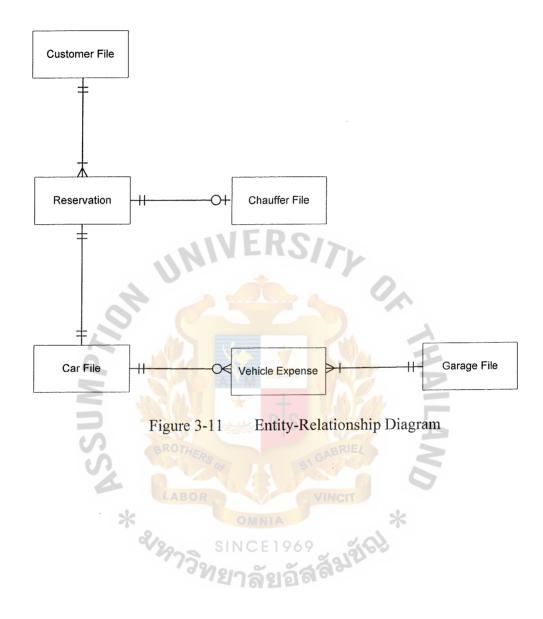

(2) Entity-Relationship Diagram

(3) Database Design

The following Database design are shown in Appendix A

- Car
- Chauffer
- Customer
- Garage
- Reservation
- Vehicle expense

Car

This table keeps detail of car information. It stores the information of car ID, type, model, series, color, license number, mileage, rental price, receive car date, car picture, status, and remark. (Refers to Appendix A Table A-1)

EKSITU

Customer

This table keeps detail of customer information. It stores the information of customer ID, type, English name, Thai name, Identification number, license number, address, birth date, telephone number with extension, fax number, e-mail address, password, activation code, status, points earn, membership expiration date. (Refers to Appendix A Table A-2) **Chauffer**

This table keeps dctail of chauffer information. It stores the information of chauffer ID, name, surname, address, telephone number, status, and fee. (Refers to Appendix A Table A-3)

Garage

This table keeps detail of garage information. It stores the information of garage Id, name, address, province, zip code, telephone number, fax number, and status. (Refers to Appendix A Table A-4)

Reservation

This table keeps detail of reservation information. It stores the information of reservation ID, customer ID, Car ID, Chauffer ID, Reservation duration, Reservation car price, Reservation driver price, Reservation fee rate, Reservation rent date Reservation due date, Reservation return date, Reservation status, Reservation fee. (Refers to Appendix A Table A-5)

Vehicle expense

This table keeps detail of expense of vehicle information. It stores the information of expense ID, Car ID, Garage ID, Check Mileage, Fix Start, Fix Finish, Fix Condition, and Fix Expense. (Refers to Appendix A Table A-6).

ลัยยัญ

(4) Interface Design

The following Interface design are shown in Appendix D

- Online Login Form
- Online Registration Form
- Vehicle Search Form
- Private Policy Form
- Administrator Login Form
- Administrator Menu Form
- Member Registration Form
- Select Customer Form
- Select Date & Time Form
- Select Vehicle Form
- Select Chauffer Form

Confirm Reservation Form

- All Reservation Form
- Receive Vehicle Form
- Return Vehicle Form
- Calculate Fine Form
- Payment Record Form
- Customer Management Form
- Member Information Form
- Edit Member Form
- Chauffer Management Form
- Chauffer Schedule Form
- Edit Chauffer Form

- Vehicle Management Form
- Vehicle Schedule Form
- Vehicle Expense Form
- Add Expense Form
- Vehicle Checking Form
- Vehicle Rental Agreement Form
- Invoice Form
- Receipt Form

Online Login Form

It is for registration for both customers who is first time login and customer who had been Bell customer through the telephone before. (Refers to Appendix D Table D-1)

KS/TV

Online Registration Form

This is for online users to fill their details, name, id number, address, telephone number, fax number, email address, and license number. (Refers to Appendix D Table D-2)

Vehicle Search Form

This page show pictures of vehicle and details of vehicle. It show vehicles by categories, compact, midsize, luxury, and VIP van. (Refers to Appendix D Table D-3)

Private Policy Form

This is an agreement between Bell and customer. It contain some policy of reservation. (Refers to Appendix D Table D-4)

Administrator Login Form

This is the login page for administrator. (Refers to Appendix D Table D-5)

Administrator Menu Form

Welcome page for administrator. (Refers to Appendix D Table D-6)

Member Registration Form

This page is for fill in customer detail, name, id number, address, telephone number, fax number, email address, and license number. (Refers to Appendix D Table D-7)

Select Customer Form

This page is for selecting customer who make reservation. It show some personal detail of customer. (Refers to Appendix D Table D-8)

Select Date & Time Form

To select pick-up date with pick up time and return date with return time. (Refers to Appendix D Table D-9)

Select Vehicle Form

This page show the pick up date and time, return date, time, and duration time of renting. Also, vehicles those were available during the time. The lists of vehicles show some detail, model, series, color, and wage. (Refers to Appendix D Table D-10)

Select Chauffer Form

This page shows chauffeurs who available during reservation date. It shows the wage of chauffer and some reservation details. (Refers to Appendix D Table D-11)

Confirm Reservation Form

This page shows all reservation details and allow user to change or edit before confirm the reservation. (Refers to Appendix D Table D-12)

All Reservation Form

This page contains all reservations of customers. It allows user to find reservation status and the rent date, sort all attributes, see details of order, and cancel reservation. (Refers to Appendix D Table D-13)

Receive Vehicle Form

This screen shows all reservations that are waiting to send to customer. All lists are the vehicle that already reserved but not sent to customer yet. (Refers to Appendix D Table D-14)

Return Vehicle Form

(Refers to Appendix D Table D-15)

Calculate Fine Form

This page shows details of customer who order that reservation and it also calculate fine and overtime and record finish mileage of vehicle. (Refers to Appendix D Table D-16)

Payment Record Form

This screen shows all reservations that are waiting for payment. All lists are the vehicle that already returned but not paid yet. (Refers to Appendix D Table D-17)

Customer Management Form

This screen shows all customers and their details. And delete customer record. (Refers to Appendix D Table D-18)

Member Information Form

This show customer personal details award point and history record of the customer. (Refers to Appendix D Table D-19)

Edit Member Form

This screen is used to edit customer's information. (Refers to Appendix D Table D-20)

Chauffer Management Form

This screen shows chauffeurs those working in Bell. User can see chauffer schedule and manage on this page. (Refers to Appendix D Table D-21)

Chauffer Schedule Form

This screen shows the chauffer history work. (Refers to Appendix D Table D-22)

Edit Chauffer Form

This screen is used to edit chauffer information. (Refers to Appendix D Table D-23)

Vehicle Management Form

This screen shows all lists of vehicle of Bell. It is able to sort all attribute on this page. (Refers to Appendix D Table D-24)

Vehicle Schedule Form

This is the schedule of the selected vehicle. It show its job history of this vehicle. (Refers to Appendix D Table D-25)

Vehicle Expense Form

This page is for maintenance vehicle. It shows detail of the vehicle and maintenance history. (Refers to Appendix D Table D-26)

Add Expense Form

This screen adds current status, date in, date out, check condition, and expense of since the car is sent to maintenance. (Refers to Appendix D Table D-27)

Vehicle Checking Form

This form is for the company to check the vehicle damage parts and details before handing the car to the customer. (Refers to Appendix D Table D-28)

Vehicle Rental Agreement Form

This form is the rental agreement for company and customer. (Refers to Appendix D Table D-29)

Invoice Form

This form is provided to the customers when handing the vehicle to

them. (Refers to Appendix D Table D-30)

Receipt Form

This form is provided to customers when they return the vehicle and make the payment. (Refers to Appendix D Table D-31)

(Appendix E Figure E-1)

Monthly Car Maintenance Report

This report shows the vehicle that goes to the garage for maintenance. It includes the starting date and ending date as well as service fee. (Appendix E Figure E-2)

Monthly Vehicle Usage Report

This report shows the detail of vehicle usage monthly. It includes rental date, return date, duration, and rental fee.

(Appendix E Figure E-3)

Monthly Wage Report

This report shows the monthly wage of chauffer. It includes the date on work, duration, and wage details.

(Appendix E Figure E-4)

Quarterly Purchase Report

This report shows the quarterly purchase car report. It includes model, series, color, car receiving date, and price of the car.

(Appendix E Figure E-5)

Late Return Report VERS//

This report shows the late return reservation. It includes the customer name, rental date, due date, rental fee, and status.

(Appendix E Figure E-6)

No Show Customer Report

The report shows customers that do not show up after making reservation. It includes customer name, rental date, due date, rental fee, and status.

(Appendix E Figure E-7) NCE1969

Daily Reservation Report

The report shows the daily reservation list. It includes customer name, rental date, due date, rental fee, and status.

(Appendix E Figure E-8)

Vehicle Maintenance Report

The report shows the vehicle maintenance report. It includes model, series, color, and mileage details

(Appendix E Figure E-9)

IV. SYSTEM IMPLEMENTATION

4.1 Overview of the System Implementation

Nowadays, many business organizations are interested in E-commerce because of its accuracy, convenience and easy to use. The company develops the e-commerce Web site as internet tools to expand their business channel to 24 hours a day, 7 days a week.

For our implementation, since the company is new to the E-commerce business tools, we will be cooperating existing system and proposed system together. The system of company will still needs to maintain existing system and proposed system together. We do not expect the company to change the whole system at once or in a short period of time. Therefore, the company will need to use manual work system to cooperate with proposed system. Due to new system, some staffs in the company may not be able to operate the proposed system. As a result, we will need to take some time to provide staffs training and knowledge of the proposed system. For the customer, since we do not have E-commerce web site before, it will be new to the customer. There might be conflicts between customers and company, but we expect these conflicts to be solved as system to reduce the conflicts and encourage customers to use our new technology until they fully adopted our new system.

4.2 Test Plan

• Database Testing

Database must be developed before doing the program because database system is the most important thing for the entire system as we need database to store all the data and information of the company.

- Review the necessary database design requirements that are stated in documentation.
- Create database from design specifications.
- Input sample data to the database.
- Revise database design to suitable structure.
- Program Testing

Once the program has been fully developed, program testing will be done for checking errors and bugs.

Write programs and perform unit testing.

Conduct system testing to make sure that all programs work properly and logically. The program has to be bugs-free and contain no errors. If there is any error or bug discover, programmer has to correct error and re-test it again.

IV. CONCLUSIONS AND RECOMMENDATIONS

5.1 Conclusions

As we study the existing system of Bell Car and Leasing Company, we discovered that the present process of the system has many problems such as inefficient record management because documents were written in paper or kept as Excel files. Also, the company does not accept individual reservation because the existing system does not applicable for individuals. Since the existing system is manual work process, there were always mistakes and errors occur between customers and company. Therefore, we conclude that the company needs to develop a new system. The new system makes use of the new computer technology to apply for more efficient system. The Web site is created to facilitate the company and to expand company's business channel. All data and information will be keep in database system which is more consistent than manual work, company can retrieve information and to save time for business transaction and communication.

The proposed system is designed and implemented to take advantage of the high technology at present. It will improve the effectiveness and efficiency of the reservation by using Web site. Web site can serve customers 24 hours a day, 7 days a week, customers are able to make reservation at any time. The new system can help the company to increase a number of customers by increasing the customer's satisfaction. In addition, it also serves staffs to track reservation easily, also, to check the present car inventory at once to make sure that company will have enough cars as they need.

We expect the proposed system to be pay back within 2 years time. As the company implement the new system, company can expand it's business channel and provide better customer satisfaction.

40

5.2 Recommendations

As the company implements the new system, they will have to train and provide knowledge to the staffs in order to quickly adapt the new system. Company will need to make use of the new system as it develops for the company to make sure of the database design and reservation system. Another essential problem will be the server; company has to make sure that the server will be working normally. There should not be server down in any time as it might loose customer and important information. Company should always backup the files in case the server might be down.

The company should periodically review the business opportunities from the use of the new system and try to maintain any add on product and services to the system.

VEHICLE RENTAL AGREEMENT

THIS AGREEMENT is made and entered into on 09/06/2004, in Bangkok Metropolis.

BY AND BETWEEN

- 1. BELL CAR RENTAL AND LEASING CO., LTD., a limited company registered under the laws of Thailand and having its registered office located at 402 Soi Rewadee, Rama VI Road, Samsennai sub-district, Phyathai district, Bangkok, the

THEREFORE, in consideration of the mutual covenants hereinafter set forth, the parties hereto do hereby agree as the followings:

- The Lessor hereby agrees to allow the Lessee to rent the following: 1. Brand: Mercedes Benz Model: 220 CDI Year: License Plate number: AA-1111, to be referred hereinafter set forth, the 'VEHICLE".
- For the period from: 2004-06-14 until: August 2004-06-15.
- The Lessee agrees to make payments in cash to the Lessor for the amount of 7,490 Thai Baht. The amount includes the rental fee (unlimited mileage), the chauffeur wage, full coverage (1st class) insurance, and all maintenance costs. The stated amount excludes tax (VAT), gasoline, toll way & expressway fee, parking fee, and other expenses.
- З.
- The first payment shall be paid within 15 days since the vehicle has returned. The Lessee has received from the Lessor, the Vehicle along with the vehicle delivery document attached at the end of this Agreement and has been acknowledged as part of the Agreement.
- 4. In case of late payment, the Lessee agrees to pay late fee. This late fee will be calculated from the first day of late payment until the day the payment is paid.
- 5. If there is suspicion that the Lessee might use the Vehicle in violation of the laws, the Lessor reserves the right to terminate this Agreement immediately, and the Lessee agrees to seek no compensation from the termination of the Aareement.
- The Lessor agrees to provide first class insurance on the Vehicle to the Lessee and will be responsible for the expenses that may exceed the insurance coverage in case of the accident if and only if the operator of the Vehicle is the chauffeur provided by the Lessor. The Lessor will not be responsible for the deductible fee and the expense that exceeds the insurance coverage if the operator of the Vehicle is the Lessee.
- The Lessee agrees to allow the Lessor to take the Vehicle in case of maintenance services and inspections. The Lessor will inform the Lessee at least 48 hours in advance. If the services take more than 24 hours, the Lessor will provide substitution vehicle until the Vehicle is ready. The usage of substitution vehicle is subjected to the same conditions as this Adreement.
- 8. The Lessee agrees not to rent the Vehicle to other party outside of this Agreement or use the Vehicle for illegal act. If the Lessee violates the Agreement, the los<mark>s and damages shall res</mark>t solely with the Lessee.
- At the end of the Agreement period, the Lessee agrees to pay the Lessor the missing parts or equipment that originally come with the Vehicle when the Agreement period begins. 9.
- 10. This Agreement shall be governed and construed in accordance with the laws of Thailand. Any dispute arising from this Agreement shall be submitted to the Thai Court,

THIS AGREEMENT is made in duplicate, each copy is to be retained by the Lessor and the Lessee respectively. Both parties Acclare that they have thoroughly read, understood, and approved the contents herein contained. IN WITNESS WHEREOF, the Lessor and the Lessee have hereunto affixed their signatures and sealed in the presence of witnesses on the date aforementioned.
