

## **ABSTRACT**

This project is a study of a criminal case statistic system of Police Information System Center. The division currently employs a half manual-based system serving the users through information service system. The study emphasizes on criminal case statistic. From the study it was found that the new system should provide users with instantaneous access to the information.

The new Criminal Case Statistic System aims to improve management information. The system provides management with accurate and up-to-date information in order to eliminate unnecessary paperwaste. In doing so, the user needs more efficient and effective services with less emphasis on the technical merits of the solution. A directive was given to explore the system employed by similar business with a view to the possible acquisition of a suitable existing system.

FOXPRO version 2.5 LAN is chosen as the implementation tool on a microcomputer network. The Applications Generator, Screen Forms Generator, and Reports Generator and used to build the application programs.
