

ABSTRACT

This project is developed under the topic of CRIB & SSc Information System for Center for Research In Business and Social Sciences (CRIB & SSc) in Assumption University (ABAC). The purpose of this project is to design the new information system in order to improve the existing operation of the CRIB & SSc in ABAC, since the operation in the existing system by the manual system, the collection of a lot of data is difficult to be managed and controlled. The proposed system is suggested to be the computerized system. This study covers the analysis, design, implementation and evaluation of a CRIB & SSc Information System to improve the efficiency in the collection of the data and it can also reduce the operating costs and time consuming.

The CRIB & SSc Information System is designed to be PC-based computerized system based on Microsoft Access (version 2.0) which is commercially available software. Applying this computerized CRIB & SSc Information System, the management finds that it would be easier to get an up-to-date reliable information in the collection of the data which will be useful and valuable in the researching process.
